1. Introduction

The OmniDocs Web API provides a secure and efficient way to access documents stored in the OmniDocs repository. This API is designed to retrieve documents based on specific input parameters such as the cabinet name, user ID, and document ID

1.1 Purpose

The main purpose of this API is:

- To retrieve documents stored in the OmniDocs repository.
- To display and download the document on the OmniDocs platform.

1.2 Base URL

URL: <https://10.15.12.163:9443/omnidocs/WebApiRequestRedirection>

2. Request Structure

2.1 Request URL Format

<https://<ServerIP>:<Port>/omnidocs/WebApiRequestRedirection?Application=<ApplicationName>&cabinetName=<CabinetName>>

3. Required Parameters

Parameter Name	Type	Required	Description
Application	String	Yes	Name of the OmniDocs application to be invoked (Example: CRMDocView)
cabinetName	String	Yes	This session index is retrieved from the WM connect call and is also used across other ODI APIs
Userdbid	Integer	Yes	The unique document index, obtained from the search API, is used to identify and retrieve the document

DocumentId	Integer	Yes	Unique document index/identifier to retrieve the document
------------	---------	-----	---

4. API Endpoint Example

<https://10.15.12.163:9443/omnidocs/WebApiRequestRedirection?Application=CRMDocView&cabinetName=rakcas&Userdbid=1514755753&DocumentId=1927107>

.

This URL will work only once for a single Document ID. It will work for one document only.
